

Search & analytics review

Google Search Console and Google Analytics · 17 March – 13 September 2026 · prepared 14 September 2026

Six months of data, covering the old single-page website. The new site went live on 11 September, so it contributes two days and almost nothing here — which is exactly as expected and not a cause for concern. What this review can tell you is what people were searching for to find you, where the old site was letting them slip away, and where the biggest openings are now that there is a site capable of taking them.

ENQUIRIES MEASURED

SECTION 1

Start here: nothing is being measured

Every report in your Analytics account shows **0 in the "key events" column** — every channel, every page, every city, across all 943 sessions. That is not a reporting quirk. There is no tracking code on the quote form, so when someone submits an enquiry, Analytics never hears about it. Taps on your phone number aren't counted either.

The practical effect is that this entire report can tell you how many people arrived and what they searched for, but not one thing about which of them turned into business. Every judgement below about whether a channel is "working" is therefore an inference from engagement time, not a measurement of enquiries.

Why this matters more than anything else in this document

You are currently paying for traffic — 135 sessions of it — with no way of knowing whether any of it produced a single enquiry. Until form submissions and phone taps are tracked, every marketing decision is being made on guesswork. It is a small fix, and it should be done before the next review.

SECTION 2

Visibility is climbing. Clicks are not.

Impressions — the number of times you appeared in someone's search results — grew almost fourteen-fold between March and August. That is real progress and it means Google increasingly understands what you do.

But the click-through rate went the other way, from 19.5% down to under 10%. Clicks peaked in July at 69 and fell to 55 in August despite that being the month with the most impressions of the whole period. You are being shown to more people and persuading a smaller share of them.

IMPRESSIONS PER MONTH

CLICK-THROUGH RATE PER MONTH

Two panels rather than one chart with two scales, because impressions and percentages don't share an axis honestly. September covers 1-11 only and is shown faded.

MONTH	IMPRESSIONS	CLICKS	CTR	AVG POSITION
Mar	41	8	19.5%	4.7
Apr	104	12	11.5%	5.7
May	248	44	17.7%	6.3
Jun	255	35	13.7%	7.3
Jul	502	69	13.7%	6.3
Aug	560	55	9.8%	8.3
Sep (1-11)	240	23	9.6%	7.3

Average position drifted from 4.7 to 8.3 over the same period. Taken together with the rising impressions, that is the signature of a site being shown for a wider range of searches, but sitting further down the page on the new ones.

SECTION 3

The biggest opportunity is local, and it is being missed

Searches that name a place — or say "near me" — account for **23% of every impression you received**, 186 of them. They converted at a click-through rate of 3.8%, against 20.1% for hire and rental searches generally. That gap is the single clearest finding in this data.

LOCAL SEARCH	CLICKS	IMPRESSIONS	POSITION
golf simulator somerset west	1	62	8.8
golf simulator cape town	0	41	26.1
golf simulator paarl	1	31	6.2
golf simulator near me	0	9	10.1
golf simulator south africa	0	7	22.4
mobile golf simulator rental near me	2	5	10.2
golf simulator stellenbosch	0	4	1.3
golf simulator johannesburg	1	3	4.7
virtual golf cape town	0	3	12
golf simulators cape town	0	2	29.5

Two lines worth reading twice

"golf simulator somerset west" — 62 impressions, one click. That is your own town, and the third most-shown search of the entire six months. You sit at position 8.8: the very bottom of page one, where almost nobody looks.

"golf simulator cape town" — 41 impressions, zero clicks. Position 26 puts you on page three. Cape Town is your largest audience by some distance, and for the most obvious commercial search in your market you are effectively invisible.

The old site could not have fixed this. One page cannot rank for six towns — there is nowhere for the words to live. The new site can, but the location pages don't exist yet. This is the clearest thing to build next: a real page each for Somerset West, Cape Town, Stellenbosch and Paarl, with genuine content about working in that area, not the same page with the town's name swapped in.

Worth noting the ceiling on this: local search results are dominated by the map pack, which is fed by Google Business Profile rather than by your website. Location pages and a complete Business Profile work together; neither substitutes for the other.

SECTION 4

What people actually search for

SEARCH TERM	CLICKS	IMPR.	CTR	POS.
mobile golf simulator	19	133	14.3%	3.4
portable golf simulator	4	94	4.3%	4.8
golf simulator somerset west	1	62	1.6%	8.8
sim2u	15	51	29.4%	1.5
golf simulator cape town	0	41	0%	26.1

SEARCH TERM	CLICKS	IMPR.	CTR	POS.
mobile golf simulator for sale	2	32	6.3%	8
golf simulator paarl	1	31	3.2%	6.2
inflatable golf simulator	3	28	10.7%	5.8
golf simulator hire	3	26	11.5%	6.2
mobile golf simulator rental	7	25	28.0%	3.3
sim-hut (a competitor's name)	0	18	0%	46.8
golf simulator for hire	1	15	6.7%	2.5

Three things this table says

Your best term is a good one. "mobile golf simulator" brings 133 impressions at position 3.4 and a 14.3% click rate. It is the phrase the business should own, and it is close to owned.

Brand awareness is small — which is good news. Only 6.5% of impressions are people searching "sim2u". The other 93% are strangers discovering you. There is a lot of headroom in a market that doesn't know your name yet.

Some of your visibility is worthless. Around 5% of impressions are people wanting to *buy* a simulator — "mobile golf simulator for sale" alone is 32 impressions. You don't sell them, so those can never convert and they drag the average CTR down. Nothing to fix; just don't read the impression count as demand. Separately, 18 impressions came from people searching a competitor's name, where you sit at position 47.

Where the traffic comes from

Sessions by channel, 17 March – 13 September 2026.

CHANNEL	SESSIONS	SHARE	ENGAGED	AVG TIME
Organic Search	532	56.4%	45.1%	48.4s
Direct	198	21.0%	21.7%	14s
Paid Social	84	8.9%	29.8%	14.5s
Paid Other	51	5.4%	60.8%	3.7s
Organic Social	45	4.8%	51.1%	14.3s
Referral	15	1.6%	40%	6.9s
Unassigned	10	1.1%	20%	41.7s
AI Assistant	8	0.8%	37.5%	30.2s

Organic search is doing the heavy lifting — 56% of all sessions, the best engagement rate of any meaningful channel at 45%, and by far the longest time on site at 48 seconds. Everything in sections 2 and 3 is about protecting and growing this.

The paid traffic deserves a hard look

Paid Social delivered 84 sessions that engaged at 29.8% and averaged 14.5 seconds — roughly a third of the time organic visitors spend. **Paid Other** is stranger still: 51 sessions marked 60.8% engaged, but averaging 3.7 seconds. A session can be counted as engaged for loading two pages, so that combination usually means rapid clicking-through rather than genuine interest.

With no conversion tracking, none of this can be judged on results — only on behaviour, and the behaviour does not look like buying intent. Before spending further, get the tracking in and let one month of data settle it.

Direct traffic looks suspicious too. 198 sessions at 21.7% engagement and 14 seconds. Direct is normally your warmest audience — people typing your name in — so it should engage *better* than average, not half as well. A likely explanation is that some social and messaging traffic is landing here unlabelled. Adding tracking tags to the links in your Instagram and Facebook profiles would move that traffic into the right column and tell you what it's really worth.

SECTION 6

Who is looking, and from where

REGION	USERS	SHARE
Western Cape — the service area	212	36%
Gauteng	165	28%
KwaZulu-Natal	56	9%
Data-centre / bot traffic	38	6%

Gauteng is 28% of your audience — the Joburg tour is validated

165 people from Johannesburg, Pretoria, Sandton, Centurion, Benoni and the rest, against 212 from the whole Western Cape. That is a substantial audience for a service that has never operated there, and it is real demand rather than a hunch. The tour page and its sign-up list are pointed at the right market.

Stellenbosch is your most engaged audience by a distance

Only 17 users, but they averaged **174 seconds** on the site against Cape Town's 65, and came back at 2.1 engaged sessions each. Small numbers, so treat it as a signal rather than a fact — but it points the same way as the wine-estate and wedding side of the business. Winelands traffic behaves like people planning something, not people browsing.

Two smaller notes. **KwaZulu-Natal is 9%** — 56 people you currently cannot serve at all. And roughly **6% of the "users" are not people**: Council Bluffs, Ashburn, Boardman and Prineville are Google, Amazon and Meta data centres. Mentally discount the totals by about a twentieth.

On devices, **62% of your search impressions are mobile** and mobile also clicks better than desktop, 13.0% against 12.0%. The new site was built and checked mobile-first, which matters more than it might sound.

SECTION 7

The new site: too early to judge

For completeness: in its first two days the new pages recorded 8 views on Packages, 7 on Contact, and two or three each on Corporate Events, How It Works, Social Events, Gallery and the Joburg Tour. Search Console shows 9 impressions for the tour page, 4 for the gallery, 3 for social events, and no clicks on any of them.

None of that means anything yet. Google takes weeks to crawl, index and settle a set of new URLs, and Search Console runs two to three days behind besides. **Do not draw conclusions from these numbers, in either direction.** The honest date for a first real read on the new site is late October.

What is worth watching before then is coverage rather than performance: whether all eleven pages get indexed, and whether impressions start distributing across them instead of piling onto the home page. On the old site, 1,946 of 1,950 impressions went to a single URL. When that spread changes, the rebuild is working.

What to do, in order

- 1 **THIS WEEK • SMALL JOB • HIGHEST VALUE**
Turn on conversion tracking. Track quote-form submissions and phone-number taps as key events in Analytics. Without this the next review will be as blind as this one. Nothing else on this list changes what you can learn as much as this does.
- 2 **THIS WEEK • FREE**
Claim and complete the Google Business Profile. Local searches are 23% of your impressions, and the map pack — which the Business Profile feeds — sits above every website result for those searches. Service areas, photographs, and a steady trickle of reviews. This is the highest return available for the least money.
- 3 **THIS MONTH • THE MAIN BUILD**
Write real location pages. Somerset West first — 62 impressions and you're at the bottom of page one — then Cape Town, which needs the most work at position 26, then Stellenbosch and Paarl. Genuine local content: venues worked at, travel from Somerset West, what suits that area. Not a template with the town name substituted; Google is good at spotting that and it is the main way these pages fail.
- 4 **THIS MONTH**
Tag your social links. Add campaign tags to the links in the Instagram and Facebook profiles so that traffic stops being counted as "Direct". You will finally see what social is actually contributing.
- 5 **HOLD UNTIL TRACKING IS LIVE**
Pause or shrink the paid spend. 135 paid sessions with engagement that reads like accidental clicks, and no way to see whether any became enquiries. Get item 1 done, run a month, then decide with evidence.
- 6 **ONGOING**
Feed the Joburg list. 28% of the audience is Gauteng and you have a page built to capture it. Push the sign-up through the same social channels that Gauteng traffic already comes from, so that when the dates are set there is a list to send them to.

What the next review should cover

Around **late October**, once there are six weeks of post-launch data and — assuming item 1 is done — a real conversion number. The questions worth asking then: are all eleven pages indexed; are impressions spreading beyond the home page; has the Somerset West position moved off the bottom of page one; and, for the first time, how many enquiries each channel actually produced.
